Subject V0 Network Resource Usage

## Description of Problem or Suggestion:

CSMS plans to use existing V0 network hubs at the DAACs. What V0 network configuration management plan will assure that sufficient resources are available when needed?

## Originator's Recommendation

HAIS Response Date 5/2/95

We have documented our plans for Ir1 usage of the V0 network resources. These are documented in the ECS Facility Plan (final version to be published at the end of June'95) and the ECS Installation Plan (published two months prior to the installation of each release). This is further combined with M&O DAAC coordination, and are the vehicles by which sufficient V0 resources are assured to be available when needed.
